1. Description of Health Insurance Policies

These policies are individual health insurance PPO plans that utilize the provider networks of Blue Shield of California (Blue Shield Life's parent company). The policies will be offered on an underwritten basis to individuals under 65 years of age, and will be marketed through general agencies, internet media, and independent brokers as components of Blue Shield's Individual and Family Plans (IFP) portfolio. Please note that benefit differences between grandfathered and non-grandfathered plans are highlighted at the end of each plan description.

3. Rates

The rates vary by age, family composition, geographic area, and underwriting tier.

a. Experience

The experience of current Blue Shield of California PPO plans as of August 31, 2010 was used to project future claims costs and premiums. Expected claim costs were trended forward to 2011 and adjusted for benefit changes. Earned premiums were adjusted forward to 2011 to reflect expected rate increases.

b. Federal Patient Protection and Affordable Care Act (PPACA) – minimum loss ratio

The overall pricing target for the proposed rates was set to meet the minimum 80% loss ratio requirement for 2011, as mandated by PPACA. Please refer to section 5 of this memorandum for a more complete description of the actuarial methodology used to project the 2011 calendar year loss ratio.

c. Grandfathered and Non-Grandfathered Plans

We currently maintain two separate sets of rates, one for Grandfathered plans and one for non-Grandfathered plans. The rates differ according to the benefit differences described below. For this filing, the rate increase does not differ between grandfathered and non-grandfathered plans.

- Grandfathered Plans

- i. Removal of lifetime limits
- ii. Restrictions on the rescission of policies
- iii. Coverage of dependents up to age 26

- Non-Grandfathered Plans – These plans received the three adjustments above applicable to Grandfathered plans as well as the following additional adjustments:

- i. Coverage of Preventive Care at 100%
- ii. Removal of Annual Dollar Limits
- iii. Guaranteed Issue Coverage for Children

d. Geographic Area

This policy will be marketed in nine geographic regions within California. Rates for each region are based on the experience for that region, modified as appropriate based on considerations of credibility and competitiveness.

A description of the nine rating regions is included in Exhibit VI. There are no changes to the region assignments since the previous filing.

e. Underwriting Tiers

Blue Shield Life's underwriting procedures will classify applicants into seven rating tiers, based on health criteria at the time of application. The attached rates displayed in Exhibit VIII apply to Tier 1 (the "Preferred Risk" tier), under which a significant

proportion of policyholders are expected to fall. Rates for the other six underwriting tiers are multiples of the Tier 1 rates.

4. Anticipated Lifetime Loss Ratio

The anticipated lifetime loss ratio for these policy forms is 90.4% (see Exhibit II). This meets the "Standards of Reasonability" of 70% as defined under Section 2222.12 of Title 10 of the California Code of Regulations.

Consistent with our proposed Active Life Reserve calculation, the projected lifetime loss ratio excludes all non-grandfathered business for years 2014 and beyond. The rationale for this assumption is that all non-grandfathered business will need to migrate into new guaranteed issue plans subject to the specific post-2014 requirements of PPACA. This assumption is why the projected member months shown in Exhibit II drops so sharply in 2014.

5. Federal Patient Protection and Affordable Care Act (PPACA) – MLR requirement

In anticipation of the minimum loss ratio requirement portion of PPACA, rates for the plans described above were determined based on targeting a 2011 calendar year medical loss ratio of 80% for the entire DOI-regulated block of business.

Based on the language in PPACA and the interim guidance released by the NAIC, our definitions of the numerator and denominator in the projected 2011 loss ratio are as follows:

- The numerator used to determine the medical loss ratio was calculated as incurred claims plus disease management expenses.
- The denominator used to determine the medical loss ratio was calculated as earned premiums less premium tax.

The first table in Exhibit III provides a crosswalk from the 2011 loss ratio shown in Exhibit II (for the purposes of the lifetime loss ratio demonstration) and the 2011 loss ratio as defined by PPACA. The key differences between the two are the removal of premium tax from the denominator and the addition of our HIPAA Guaranteed Issue business (which we do not include for the purposes of meeting the 70% lifetime standard).

Please refer to Exhibit III for the breakout of the loss ratio calculation and the trend components used to forecast 2011 revenue and costs. Please note that the percentages shown in this exhibit are additive, not multiplicative. The following trend components were applied to the projected 2010 revenue and cost of healthcare.

- 2010 Rate Increase – Represents the contribution of our October 2010 rate increase to the year over year revenue trend for 2011.
- 2011 Rate Increases – Represents the combined impact of the filed and approved January 2011 rate increase and the proposed March 2011 rate increases in this filing.
- Demographic Trend – Reflects the projected change in revenue and claims we expect to see due to changes in age and family status. In general, this adjustment affects both the revenue and claims equally and thus has a negligible impact on the projected loss ratio.

- **Plan and Region Mix** – Represents the impact of membership shifts between plans and between regions. In general, this has a negative impact on both revenue and claims as members seek to offset rate increases by downgrading into a less rich benefit designs.
- **HIPAA Guarantee Issue Mix** – Represents the mix impact of the projected growth in our DOI-regulated HIPAA guaranteed issue plans (HIPAA GI). The growth is a result of a recent change to our HIPAA GI offerings. Prior to this change, most of our new HIPAA GI membership came from the plans offered under our DMHC-regulated entity. With the revisions to our plan offerings a majority of our HIPAA GI business is now coming from our DOI-regulated plans. Because we are limited by law in the rates we can charge for this segment, HIPAA GI membership growth has the effect of increasing the loss ratio.
- **Claims Trend** – Reflects the rising cost of healthcare due to unit cost, utilization, and benefit leveraging. Please refer to Exhibit IV for a detailed breakout of the underlying components of this trend.
- **Benefit Change** – Represents changes to the benefit designs of the plans outside of healthcare reform mandated changes.
- **Duration Trend** – Represents changes in the costs associated with the duration of the member. Generally, longer duration members are associated with higher costs due to the gradual wearing off of underwriting.
- **Selection Trend** – Reflects the impact to claims as a result of plan transfers and lapses. Members that transfer to less rich benefit plans tend to be healthier on average. This results in a higher per member cost for the remaining membership on that plan. A similar dynamic exists when we see lapse rates in excess of what we normally expect based on our durational lapse rates.
- **Healthcare Reform Impact** – Reflects the impact of covering healthcare reform mandated benefits to our grandfathered and non-grandfathered business.
- **Provision for Adverse Deviation (PFAD)** – Our historical pricing approach included a 1% load for PFAD. However, with the greater uncertainty in the market due to PPACA (guaranteed issue coverage for children, mandated benefit changes, etc.), the economy, and the one-way nature of the 2011 minimum loss ratio rule, we are increasing this load to 3% to cover that additional uncertainty.

6. Proposed Rates

The proposed rate increases by plan, region, family tier and age are shown on Exhibit VII. The increases for the grandfathered and non-grandfathered plans are equal with only slight differences for rounding to the nearest whole dollar.

The proposed rates by plan, region, family tier and age are shown on Exhibit VIII. There are two versions of this exhibit showing the proposed rates for grandfathered and non-grandfathered plans.

The proposed rates are based on an effective date of March 1, 2011 and targeting an 80% medical loss ratio. Each month of delay past the assumed effective date will cause a medical loss ratio higher than our target. Therefore, an adjustment to the proposed rate increases will be required for each additional month of delay. The following table shows the additional rate increase required for each month of delay.

Rate Delay to	Additional Rate Increase Required
April	0.7%
May	1.5%
June	2.6%

The additional rate increase would be applied to each rating cell level which would result in an average increase equal to the required amount. As an example, if the rate increase is delayed to May, the rates would be increased by 1.5% across all rating cells to hit the 80% medical loss ratio target.

7. Proposed Effective Date

The premiums are calculated to be effective March 1, 2011.

Certification

I certify that, to the best of my knowledge, this filing is in compliance with the laws and regulations of the state of California with regard to development of premium rates and that the benefits are reasonable in relation to the premiums charged.
